

## Rebit™ Unveils Multi-PC Software Installable On Any External Hard Drives

Longmont, Colorado – January 6, 2009 – Rebit Inc., the company dedicated to relieving the burden of backup for PC users, today announced a new, multiple-PC version of its fully automatic backup and recovery software, available on CD January 30.

Capable of backing up a maximum of six PCs, Rebit's multi-PC software will transparently manage the entire backup process across all PCs. The software can be password-protected on an individual PC to keep information private between PC users. Rebit also intelligently manages space requirements, always aware of how much space is available on the external disk before allowing another PC to be added to the backup drive. Rebit's software includes a file de-duplication feature so only one copy of the operating system, applications, and other duplicate user files across multiple PCs is stored on the backup drive, saving considerable storage space across multiple PCs.

In addition, Rebit announced that its successful current product offerings are now available on CD, providing easy consumer installation on any external hard drive. The CD is available now to Resellers and end-users through ASI Computer Technologies ([www.asipartner.com](http://www.asipartner.com)) and Rebit's web site.

Rebit will be demonstrating the software at Storage Visions 2009, January 6-7 at The Flamingo Hotel, and at ShowStoppers @ CES, January 8 at the Lafite ballroom in The Wynn Hotel & Casino in Las Vegas.

Rebit software product Installation is "ridiculously easy" for the end-user. Place the CD into the slot on your PC or laptop. Rebit will automatically find all appropriate disk drives, and will install on the one the user selects. That's all there is to it.

"Now there is a simple, dependable, and complete backup and recovery solution for businesses and homes with one to multiple PCs and existing external hard drives," commented Charlene Murphy, executive vice president of sales and marketing, Rebit Inc. "Our customers have requested these capabilities, and we are pleased to accommodate them."

Providing simple and fully automated backup and complete system recovery for Windows XP and Vista, Rebit provides complete and continuous backup of not only data, but applications and the entire operating system - everything on one's PC. Recovering any file or folder is simple - just use Windows Explorer "drag and drop." If a PC hard drive crashes, Rebit painlessly recovers everything. There is no need to re-download, reinstall, or re-register applications, and because of its NeverFull™ feature, Rebit never fills up, always delivering reliable backup. Rebit is available on a software CD for easy installation on any external hard drive use. Another option is the complete Rebit appliance, which includes a hard drive, and plugs into a PC's USB port.

### **About Rebit**

Rebit Inc. is committed to delivering a solution that is automatic and complete, removing the burden of managing backup from users. In 2008 Rebit was named one of the "25 Coolest Emerging Tech Vendors," by Computer Reseller News for its innovative, cutting-edge technology. With Rebit, PC users experience continuous data protection for their entire PC all day, every day. No setup. No configuration. No scheduling. No buttons. No software installation. And recovery is easy - just drag and drop from Windows Explorer. Contact the company at [www.Rebit.com](http://www.Rebit.com), or call toll-free at 1.866.635.5784.
